Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.				
1. AGENCY USE ONLY (Leave blank)	2. REPORT DATE Oct. 17, 1994	3. REPORT TYPE AND DATES COVERED <i>Final 1 May 91 - 31 Jul 94</i>		
4. TITLE AND SUBTITLE High-level Parallel Programming Tools for Finite Element Analysis		5. FUNDING NUMBERS  <i>DAAL03-91-G-0149</i>		
6. AUTHOR(S) Paul S. Wang				
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Institute for Computational Mathematics Dept. of Mathematics & Computer Science Kent State University Kent, OH 44242		8. PERFORMING ORGANIZATION REPORT NUMBER		
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES) U. S. Army Research Office P. O. Box 12211 Research Triangle Park, NC 27709-2211		10. SPONSORING/MONITORING AGENCY REPORT NUMBER  <i>ARO 28908.4-MA</i>		
11. SUPPLEMENTARY NOTES The view, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy, or decision, unless so designated by other documentation.				
12a. DISTRIBUTION/AVAILABILITY STATEMENT  Approved for public release; distribution unlimited.		12b. DISTRIBUTION CODE		
13. ABSTRACT (Maximum 200 words)  Automatic generation of sequential and parallel programs can bring the power of modern computers to more engineers and scientists. The project investigated <i>parallel code generation</i> and <i>automatic derivation of parallel finite element routines</i> . Software packages GENCRAY, a code translator producing Cray Fortran, and PIER, a finite element code derivation system, have been constructed as research tools.				
14. SUBJECT TERMS Automatic code generation, parallel computing, finite element method, interfacing symbolic and numeric computations.		15. NUMBER OF PAGES 5		16. PRICE CODE
17. SECURITY CLASSIFICATION OF REPORT UNCLASSIFIED	18. SECURITY CLASSIFICATION OF THIS PAGE UNCLASSIFIED	19. SECURITY CLASSIFICATION OF ABSTRACT UNCLASSIFIED	20. LIMITATION OF ABSTRACT UL	

## FINAL REPORT

1. ARO PROPOSAL NUMBER: 28908-MA
2. PERIOD COVERED BY REPORT: 1 May 1991 - 31 July 1994
3. TITLE OF PROPOSAL: High-level Parallel Programming Tools for Finite Element Analysis
4. CONTRACT OR GRANT NUMBER: DAAL03-91-G-0149
5. NAME OF INSTITUTE: Kent State University
6. AUTHORS OF REPORT: Paul S. Wang

**Statement of the Problem Studied**

Improved operating environments and powerful parallel programming tools are vital to realizing the full potential of modern parallel processors. Under this project, we studied the automatic generation of parallel programs in the important application area of finite element analysis (FEA). A software system is built to derive the required formulas and procedures through symbolic computation. These formulas and parallel procedures are then fabricated, through a *code generator* into parallel code to run on a given parallel processor.

The project involves two related areas:

1. Parallel code generation – A portable code generator written in C (Lex/Yacc) to produce parallel code for the Warp, Encore/Sequent computers, that can be used from any symbolic computation system.
2. Automatic derivation of parallel finite element routines – A Common Lisp based package for the automatic mapping of finite element computations on the Warp, Encore/Sequent parallel processors and for deriving parallel procedures to be translated by the code generator into routines readily executed on the target machine.

**Summary of the Most Important Results**

Good progress has been made towards the overall goal of automating the generation of sequential and parallel codes for finite element analysis and in making the code generation software system easier to use. The free-standing code translator GENCRAY has been completed and a paper appeared in ACM/TOMS. The implementation and testing of the PIER software system, with special emphasis on text-book style input handling has been accomplished. Dr. Naveen Sharma finished his Ph.D. in this area.

## List of All Publications and Technical Reports

## Scientific Personnel

Project personnel include Simon Gray, Naveen Sharma, Paul S. Wang (P.I.), and Syuzanna Zakharova.

Dr. Sharma finished his Ph.D. in the Fall of 1992. He left Kent to work for industry (Xerox Research, Rochester, N.Y.) The other graduates students are still making progress in their Ph.D. degree programs.
